# EXHIBITION OF LIVESTOCK IN MINNESOTA

## SUMMARY OF STATE RULE

## GENERAL REQUIREMENTS

The exhibition management may adopt more but not less restrictive health requirements than required by the state rule. Livestock known by the exhibitor to have an **infectious, communicable disease** or to have been exposed to an infectious, communicable disease or to be from a quarantined herd may not be entered in an exhibition. Warts and ringworm are considered communicable disease. Therefore livestock affected by these diseases cannot be exhibited. A statement from a veterinarian that an animal is being treated for these diseases is not acceptable. All livestock will be **inspected** by the Official Veterinarian on the opening day of the exhibition and display during the exhibition. The Official Veterinarian will order the immediate removal to a quarantine facility or removal from the exhibition premises of any livestock with symptoms of infectious or communicable diseases. Animals placed in a quarantine facility must remain there until removed from the exhibition premises. They may not enter a show ring. This includes livestock with warts or ringworm.

All **testing** must be conducted prior to the exhibition, and a record of the test results on a test chart or Interstate Health Certificate must accompany the tested animals. Livestock entered in a **Petting exhibit are not** exempt from the exhibition rules if the animals are from more than one farm or there are other animals at the exhibit.

**SWINE:** (Originating from Minnesota): All swine (including barrows) must have a negative pseudorabies test within 30 days prior to the opening date of the exhibition or originate directly from a Qualified Negative or Qualified Negative Gene-Altered Vaccinated herd. Differential pseudorabies tests are approved for exhibition of Minnesota swine. For exception to test requirements, refer to “Slaughter Classes”

**DOGS:** Dogs over 6 months of age must be accompanied by a current certificate of Rabies Vaccination issued by a Licensed Veterinarian.

**HORSES:** (Originating from Minnesota): Equine infectious Anemia (EIA) testing required  
(NOTE: See general requirements.)

**CATTLE, GOATS, SHEEP:** (Originating from Minnesota): No specific requirements. (NOTE: See general requirements)

**CATTLE, GOATS, SHEEP, HORSES, SWINE:** (Originating Minnesota): Animals must meet the Minnesota Importation Requirements in addition to the requirements outlined in this summary. The Certificate of Veterinary Inspection must; list the name of the exhibition as consignee. Certificates will be accepted if examination and tests are conducted within 90 days prior to the exhibition, except swine pseudorabies tests, which must be made with 30 days the GPE ELISA test is approved for importation of swine.

**SLAUGHTER CLASSES:** (Terminal Shows): No health certificate, tests, or individual identification is needed if animals are isolated in a separate building from all other classes and all animals are slaughtered during or immediately following the exhibition. Common unloading chutes, alleys, and scales may not be used. A common show ring may be used if the slaughter class is shown last. Some swine terminal shows, including the Minnesota State Fair, do require testing of slaughter class swine. Check with show management for specific rules.

**HARVESTING TIPS:** Try to harvest root crops when the soil is relatively dry. They should not be woody or overgrown. Tops should be trimmed to 2 inches above the crown. Long tops draw moisture from the roots and cause shriveling. Take care not to break the natural protective skin or outer layer of the specimen. Stems should be left on all vegetables except tomatoes and muskmelons. the stem helps keep the vegetables from drying out.

**CLEANING TIPS:** Dirt detracts from the appearance of vegetables, but it is not advisable to wash all vegetables to clean them. Tender-skinned vegetables such as peas, beans, summer squash, peppers, tomatoes, and eggplant should be wiped clean with a soft cloth. If necessary to wash root crops, soak in cool water and gently wash with soft cloth; do not scrub. Leafy crops such as cabbage, lettuce, spinach, and Swiss chard can be washed carefully. A soft bristled brush can be used to clean cauliflower, kohlrabi, cucumbers, and onions of any soil.
